Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

It is a cativation by furin or a furin-like protease cleaves the protein. The two barts, PA-63 the latter is the mature protein. The cleavage occurs at the cell surface and probably in the serum of infected animals as well; both native and cleaved PA are able to bind to the cell receptor. The release of PA20 from the remaining receptor-bound PA63 exposes the binding site for EF and LF, and promotes oligomerization and internalization of the protein.

MISCELLANGOUS: In Ref.9 multiple mutagenessis experiments were performed that the residues present in the small loop of domain 4, and not the ones in the large loop, are involved in

Merozoite surface protein 1 precursor (Merozoite surface antigens)
(PPMSA) (P195).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         -i- PTM: Merozoite surface antigen contain the sequence of 83 kDa
kDa and 19 kDa antigens which are the major surface antigens
merozoites. The maturation take place during schizont.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             --VENPNPTCN----EN----NGGCDADAKCTEEDSGSNG-KKI 1590

PTM: Merozoite surface antigen contain the sequence of 83 kDa, 4
kDa and 19 kDa antigens which are the major surface antigens of
merozoites. The maturation take place during schizont.
                                                                                                                                                                                                               -!- SUBCELLULAR LOCATION: Attached to the membrane by a GPI-anchor

J. Mol. Biol. 274:394-407(1997).

C. i- FUNCTION: Myosin is a protein that binds to actin and has ATPase activity that is activated by actin.

C. i- SUBUNIT: Myosin II heavy chain is two-headed. It self-assembles into filaments. Hexamer of 2 heavy chain subunits (MHC), 2 alkali ilght chain subunits (MLC) and 2 regulatory light chain subunits (MLC).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              ...-:- SUBCELLULAR LOCATION: HIGHEST CONCENTRATION IN THE POSTERIOR CELL

-!- FUNCTION: Involved in reticulocyte adhesion. Specifically binds human reticulocyte cells.
-!- SUBDNIT: Homodimer (Potential).
-!- SUBCELLUIAR LOCATION: Membrane-bound.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Length 2869;
